

1 ROUND STRUCTURE

- Command Phase.** Gain CMD tokens (set by your faction). Make an Initiative Check: the winner picks who has Initiative; each loser gets +1 CMD token.
- Jump Phase.** Take turns. On your turn: Open a Jump Point, Jump In a unit (deploy within 6" of a friendly Jump Point), or Pass. Ends when all players have passed.
- Tactical Phase.** Take turns. Drag to Select a battlegroup and activate it, finishing each step for every unit before the next. Give each activated unit an Activated token. Ends when all units have activated.
- End Phase.** Check mission scoring. Clear Activated tokens. Discard unused CMD tokens. Begin a new round.

INITIATIVE CHECK

- Roll a number of D6 equal to your faction's Initiative value.
- Each **2 or 3** is one success; each **1** is two successes.
- Most successes wins and chooses who holds Initiative this round. Ties: lowest dice sum wins, then clockwise from the last holder.
- Every player who did not win gains +1 CMD token.

ACTIVATIONS (per unit)

- Movement Step.** Pivot any amount, then move ahead up to the Thrust value.
- Passive Attacks Step.** Suffer passive attacks from enemies in range and arc.
- Action Step.** Take one Action.

ACTIONS

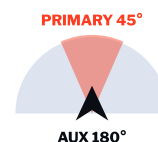

- Open Fire.** Attack with all weapon systems. Roll equal to or under Silhouette to hit. Target rolls Shield saves against the dice that hit. Assign unsaved hits to already-damaged ships first.
- Scan.** Scan a single object or ship within 3", or collect any or all Free-floating asset tokens within 3".
- Scramble Squadrons.** Deploy one carried Mass 0 unit wholly within 6". It takes one action, then gets an Activated token.
- Jump Hop.** If all ships are within 6" of a friendly Jump Point, remove them and set up within 6" of a friendly Jump Point in another Sector.
- Jump Out.** If all ships are within 6" of a friendly Jump Point, remove them to your Reserves.
- Resupply** (Utility Ships). Select a friendly Mass 1–3 ship; until end of round it counts as +1 Mass for Blockading, up to its own Mass.

COMMANDS (spend CMD)

- All Hands** (1). After a unit's first action, take a second, different action with it.
- Executive Oversight** (1). Re-roll one attack die, initiative die, or saving throw.
- Power to Engines** (1). At the start of a unit's movement step, move twice this step (pivot and move both times).
- Power to Weapons** (1). Before rolling to attack, subtract 1 from each attack die (min 1) for this Salvo. More crits; does not prevent duds.
- Power to Shields** (1). Before rolling saves (Shields 1+), add 1 to the unit's Shields for this Salvo.
- Red Alert** (1). A friendly ship without an Activated token that would be destroyed is not; it regains 1HP. At the end of its next activation it drops to 0HP (no second Red Alert), unless it jumped out.
- Requisition** (1, Hypergrowth). On your Jump In turn, form a new unit from Shipyard ships, pay their Credit cost, and jump them in as if from Reserves.

COMBAT & ARCS

DIE	D6	D8	D10	D12
DMG	1	2	3	5

- Roll **equal to or under Silhouette** to hit. Target rolls Shield saves against the dice that hit.
- Critical:** a natural 1 adds a bonus hit of the same die type. **Dud:** a die at its max value always misses and is never saved.
- Saving throws use the same die type as the weapon; roll equal to or under **Shields** to deflect.

RULES YOU MIGHT FORGET

- Unit Coherence.** Ships stay within 6" of all others in their unit.
- Drag to Select.** A lead unit plus unactivated units within 6" of it; Combined Mass **10 or less**.
- Squadron Capacity.** A unit carries Squadrons up to twice its Combined Mass.
- Arcs.** Primary 45° front; Auxiliary 180° front; Facilities 360°.
- Explosion Check.** Roll a D6; equal to or under the ship's Silhouette and it explodes, hitting all units within 3" with a D6 attack (1 dmg per hit).
- Easy Target.** Moved under 3" and did not Jump; enemies may re-roll attack dice against it.
- Inertial Strain.** Any single pivot over 90° and the ship cannot make Primary attacks that activation.
- Escort / Blockade.** Greatest Combined Mass within 6" (tie-break: most ships within 6").
- Gravity Well.** No Jump Points placed, and no jumping, within 9" of a Planetoid.
